# SignagePro

Deliver Dynamic Digital Content to Any Audience in Any Location.

SignagePro is the ultimate, cost effective hardware and software solution that provides for both the display and management of dynamic digital content.

SignagePro is a digital signage solution that creates new marketing and information sharing portals to reach target audiences in different locations with real time information.

SignagePro is the ultimate solution that provides both hardware and software for the display and management of digital content and is a highly cost effective solution.

SignagePro allows the scheduling of content delivery for automatic updates of digital content, and is centrally managed by preprogramming custom system settings.

## Presentation Display

Dynamic Digital Signage

PRESENTER

One Windows PC, Many Interactive Touch Screen Monitors.

Presenter allows the delivery of cost effective, dynamic digital signage and interactive touch-screen kiosks to multiple, independent remote stations at any location in the world.

Presenter is a combination of hardware and software that enables a single PC to drive and control up to 16 remote monitors simultaneously and independently from a centralized location.

Each monitor has its own Windows desktop and can be programmed to work completely & independently of the others - as though there were 16 separate computers.

Presenter reduces unnecessary costs and eliminates the need of having multiple PCs to run several different Windows applications concurrently.

XPANDER

Display any message format in a single display, over up to 64 tiled monitors.

A single PC can display any message input in any format, including Flash, Powerpoint, movies, internet, scrolling text, or RSS feeds in a single display, expanded over up to 64 tiled monitors.

The XP4 range of graphics cards provide high-end multi-screen capabilities for complex data/video walls or multiscreen desktop applications.

Each XP4 supports 4 screens using multiple XP4 cards, making it possible to spread the Windows® desktop across 32 screens.

The construction of Xpander multi-screen display can be arranged in any rectangular format with optional video overlay.
